

How many cases of poison ivy did you treat
in the office during the past week (in August, 2008)?

There were 14 responses, resulting in a mean of 1.5 cases per week. The mode was 1.

Examples:

"About one case per week. No way to prove which Rhus plant is involved - ivy? oak? sumac?
another? The time to collect data is Apr - Oct. Not many cases during the winter."

"1, but ask again in about 6 weeks when hunting season starts."
